Biofuels for automobile transport. Biobutanol and biodiesel fuel mixture a new renewable fuel for automobiles. The perspective to use other renewable Alternative technologies of the vehicle. Biofuels production scheme. Biofuels for automobile transport – Status of the present day. Lignocellulosic ethanol production is one of the core technologies to solve today's energy problem. Bio-Butanol Projecting the 3rd Wave. Properties of gasoline and alcohol fuels. Butanol –production. Typical end-productions of AB process and combustion energy of products. Why we should choose butanol? Advantages and disadvantages of using biodiesel. Ecological aspect.
